PAIN MANAGEMENT

McLAREN OAKLAND PAIN MANAGEMENT SERVICES

Our dedicated team works together to provide complete care for patients dealing with acute, chronic, and cancer-related pain. We aim to improve your patient's quality of life by offering personalized treatment and support every step of the way.

We specialize in helping manage pain following surgery or injuries. Our goal is to relieve your patients' pain with the least amount of side effects. To do this, we use a variety of pain-relief methods, including medication, patient-controlled pain management (PCA), and continuous epidural analgesia (a method of delivering pain relief directly to the spine).

If your patients are living with chronic pain, we know how it can affect their everyday life. Our team provides a comprehensive, multidisciplinary approach to evaluating and treating a wide range of pain conditions.

For those facing cancer, managing pain is an important part of their care plan. We offer support both in the hospital and in our outpatient clinics. Our approach includes detailed evaluations and advanced treatments, such as medication, nerve blocks, and more specialized procedures like epidurals or spinal catheters, to help reduce pain and improve comfort.

WE WELCOME YOUR REFERRALS

Fax referrals to (248) 620-4265, or send through Cerner.
